

THE CASE REVIEW & INTRAMURAL SCIENCE PROGRAM (CRISP) PRESENTS

## A NEW PROTOCOL!

NIH PROTOCOL #: 11-C-N070

### The NCI Best Case Series Program: A Retrospective Review of Cases of Cancer Patients Treated with an Alternative Regimen

NCI invites you to submit data from your best cases in alternative cancer treatment for review.

#### Primary Objectives:

- To verify the pathological diagnosis of cancer
- To verify objective changes in the tumor measurements during the time period of the alternative intervention
- To verify the medical history

#### Secondary Objectives:

- To verify the progression-free survival time of individual patients
- To verify the overall survival time of individual patients

#### Eligibility Criteria:

- Pathologically or cytologically confirmed diagnosis of cancer
- Treatment with an alternative approach exclusively or  $\geq 4$  weeks after conventional treatment
- Detectable disease prior to the start of the alternative treatment
- Adequate documentation in the medical records of conventional and alternative regimens, and dates of interventions
- Identifiable, objective changes in the malignancy during time of treatment

#### Program Outcomes:

- Potential recommendation for NCI-initiated research
- Potential publication of NCI review in a peer-reviewed journal
